INTRODUCTION

Who We Are ?

MIRA (Valuable Digital Asset, Transparent for everyone Around the World.) is a Blockchain technology company. Our mission is to accelerate the mass adoption of digital assets by bridging traditional and decentralized finance.

What is DeFi?

DeFi stands for Decentralized Finance. It enables a global, open alternative to every financial service you use today — savings, loans, trading, insurance and more — accessible to anyone in the world with a smartphone and internet Connection.

The world's financial system needs upgrading. In an age of increasing globalization, money transfers still rely on outdated

legacy systems. Payment solutions and financial services require numerous intermediaries and are often siloed. Most forms of currency are issued and controlled by centralized governments.

Bitcoin vs. Traditional Finance

Ten years ago Bitcoin emerged as an alternative global payment system. Its value proposition is fairly simple: instead

of the traditional reliance on centralized banks and third-parties, Bitcoin provides a decentralized, open, and peer-to-peer payment system.

The Growth of Decentralized Finance (DeFi)

We foresee an emerging third phase, the Institutional Phase, where Bitcoin is increasingly held as an asset by financial institutions such as banks, hedge funds, pension funds, sovereign wealth funds, endowment funds, and others. Why would they hold Bitcoin? It's a hedging instrument against the risks inherent in centralized fiat currencies, debt instruments, and equities.

This Institutional Phase should eventually see even governments' central banks use Bitcoin as a reserve asset alongside gold, fiat currencies, debt instruments, etc. The expansion of the Bitcoin ecosystem over time has translated into a tremendous increase in adoption and value. However, with everchanging transaction fees, high volatility, long confirmation times, and a deflationary economic model, Bitcoin remains a better store of value than a currency for daily use.
